Veritas AI: an open-source research assistant you can check

Joseph Frimpong · Oded Asiedu · Huihuo Zheng

Team Veritas AI

OSI Hackathon 2026 — October 22, 2026

Team Veritas AI

We built Veritas at the **OSI Hackathon 2026**.

Joseph Frimpong

Oded Asiedu

Huihuo Zheng

Argonne National Laboratory

Three places, no link

A scientist’s knowledge sits in **three places that do not talk to each other**:

Reference manager

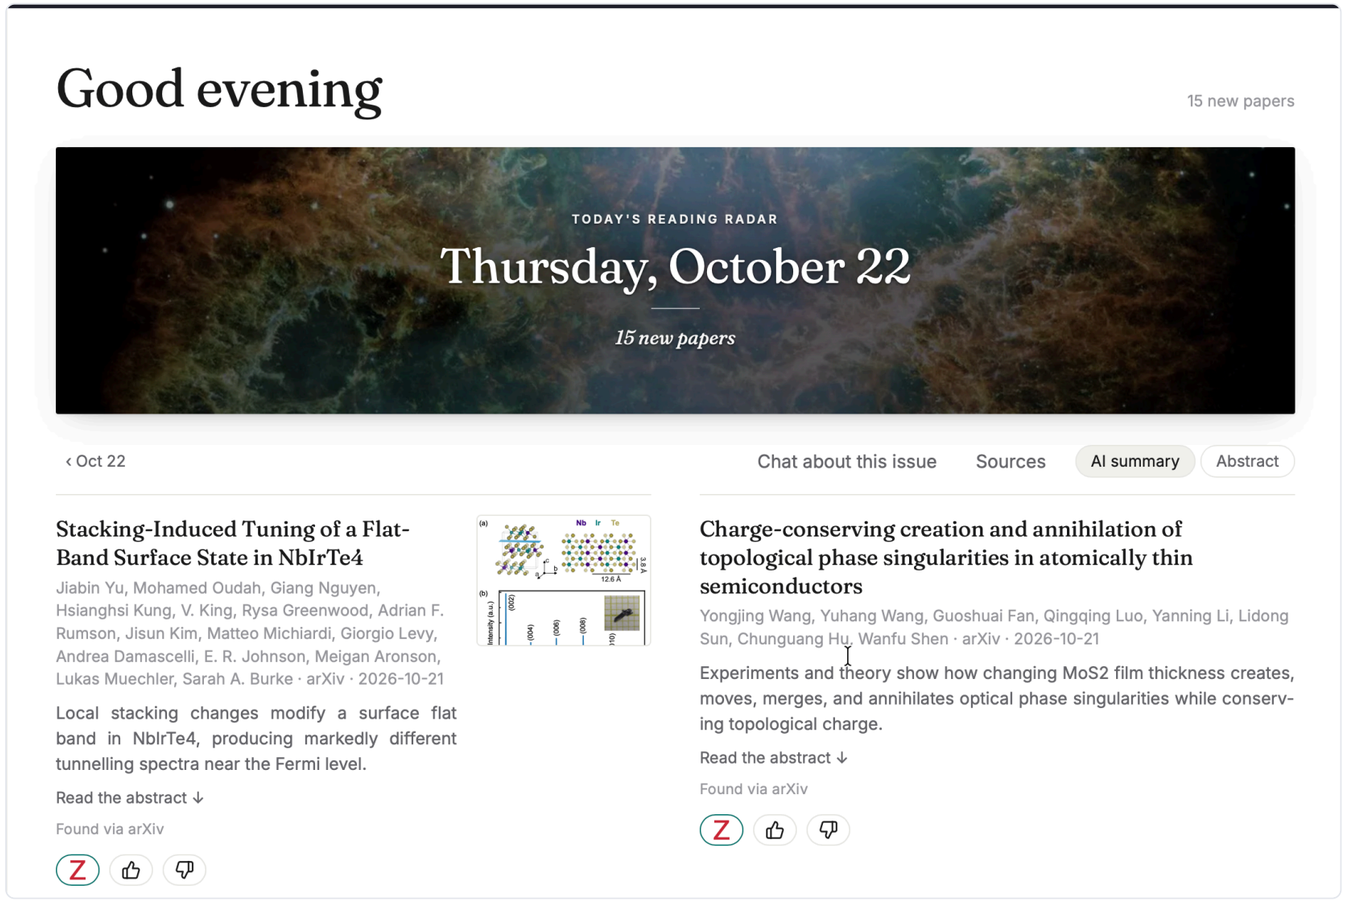

Notes

New preprints

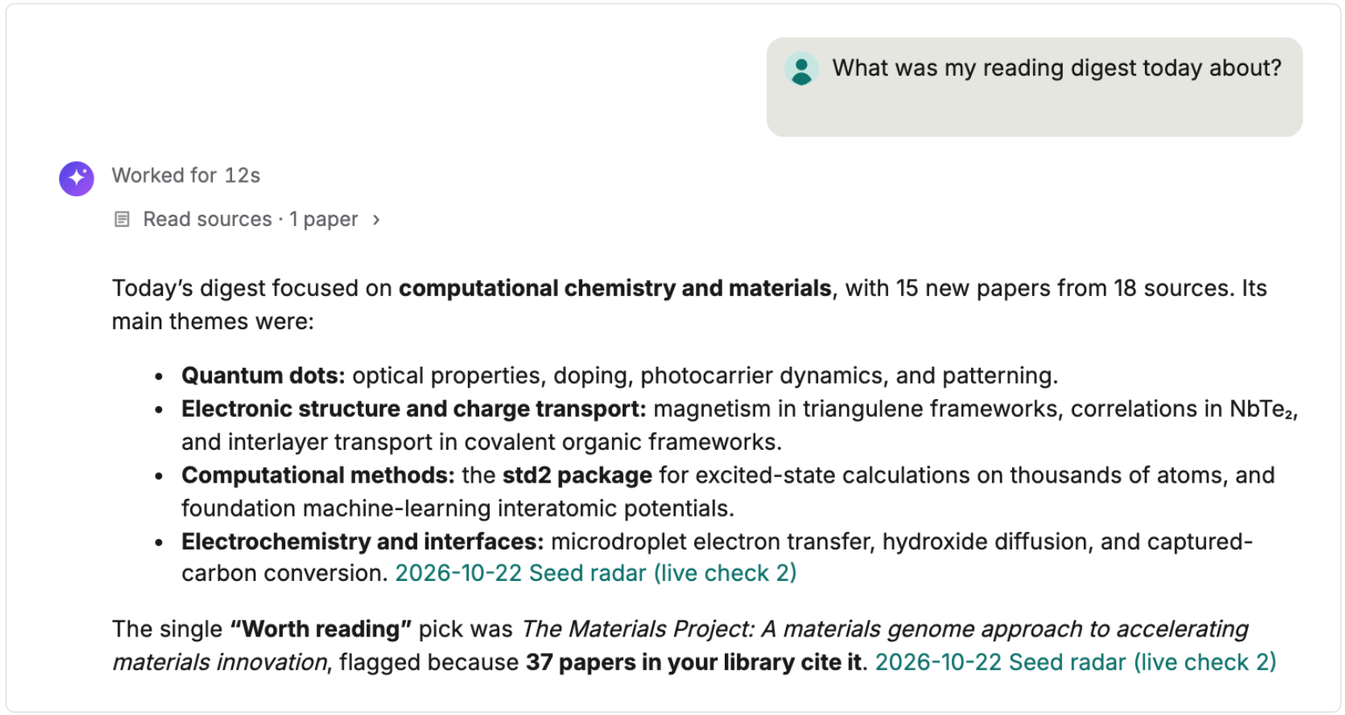

- Chat assistants answer from none of them, and cite papers you cannot open
- Veritas joins the three on **your own device** and links every answer to a paper or note you can check

Reading radar

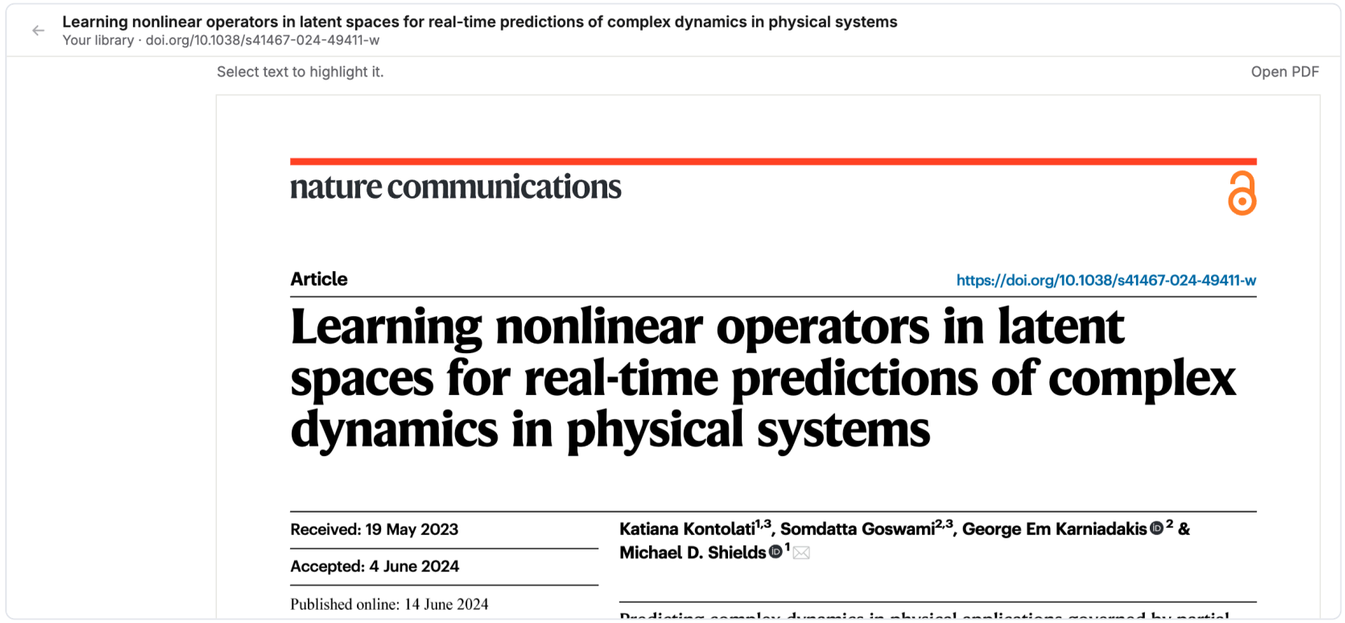

- Starts from **the papers you wrote** and your interests
- Watches arXiv, journals, **RSS feeds** and Valency Bond
- Keeps only new papers close to your work, and says which of your papers each one matches
- Like or dislike a paper: it **learns your taste**

Chat with citations

- Ask about your library, your notes or **today's digest**
- Every claim cites a paper or note
- Sources on or off per question: Papers, Notes, Scholarly, Web, **Valency**

Links that open

- A DOI opens **the PDF in your library**
- Else a **legal open-access copy** (OpenAlex), else the abstract
- Publishers that block bots and frames no longer break the link

Connects to

Your sources

- Zotero library
- Obsidian notes
- Any folder of notes and PDFs

The literature

- arXiv
- OpenAlex and journals
- RSS feeds you follow
- Valency Bond: 500M+ papers, ChemRxiv included

Your AI

- Runs on your own device
- Through MCP, your library plugs into any AI chat that supports it
- Claude
- ChatGPT and others

Veritas AI

Before the event we had built the Zotero and Obsidian tools. **During the hackathon** we built:

- the reading radar and daily digest, with tools the assistant uses to read it
- links that open papers directly, and the Valency Bond connector
- a knowledge base of 31 research personas, and Veritas itself as one open-source project
- **Next:** persona agents: pick fields such as HPC and computational chemistry, and Veritas answers from each angle

- **Open source (MIT):** github.com/frimpsjoek/veritas-ai
